

Floating

How do they float there?
Way up high
How don't they fall down?
Down from the sky

Do they have wings?
Hidden from sight
Or propellers beneath them
Wispy and white

Maybe they're a disguise
A flying machine
But then what of the small ones
With a middle that's seen

How do they sit there?
Flat on the air
Without dripping down from the rest?
In a line up there

How do they make shapes?
Soon to fade again
Why do they grey and sink
When it's time to rain

Why don't they ever
Touch the ground?
Why don't they ever
Make a sound?

How do they disappear?
Void from the sky
Then return the next day
How do clouds fly?
